About Florida International University

Florida International University (FIU) is recognized as a Carnegie engaged university. It is a public research university with colleges and schools that offer more than 180 bachelor’s, master’s and doctoral programs. As one of South Florida’s anchor institutions, FIU contributes $8.9 billion each year to the local economy. FIU is Worlds Ahead in finding solutions to the most challenging problems of our time. FIU emphasizes research as a major component of its mission. FIU has awarded over 200,000 degrees and enrolls more than 54,000 students in two campuses and three centers including FIU Downtown on Brickell, FIU@I-75, and the Miami Beach Urban Studios.

About the College of Arts & Sciences

As the heart of a leading public research university, the College of Arts & Sciences plays a vital role in the intellectual, cultural and civic life of local, national and international communities. The college provides an educational foundation that prepares FIU students to be successful and engaged citizens in a global society.

About School of Environment, Arts and Society

By bringing together the natural sciences, social sciences and humanities, the School of Environment, Arts and Society (SEAS) is transforming the way we conduct research, educate students and engage the community. Because the world’s environmental challenges are multidimensional, the school’s revolutionary approach to a full spectrum education will ensure our students become innovative leaders of the 21st century. SEAS includes three signature departments: Biological Sciences, Earth and Environment, and English. The school also houses many of FIU’s prominent centers and programs.

Department of Earth and Environment

As part of FIU’s commitment to tropical conservation, FIU and the National Tropical Botanical Garden have joined forces to create the International Center for Tropical Botany at The Kampong in Coconut Grove, Fla. Scientists at the center preserve and study tropical plants for future generations, with a strong focus on the economic uses of tropical plants. Through community partnerships, a wide range of facilities are available at partner institutions including Fairchild Tropical Botanic Garden, Zoo Miami, and Montgomery Botanical Center. FIU also maintains a strong partnership with Everglades National Park, and atmospheric research is enhanced by partnerships with NOAA’s National Hurricane Center located on FIU’s Modesto A. Maidique Campus.

Financial Support

Financial support is available to eligible Ph.D. students through teaching assistantships, competitive fellowships, and faculty research programs.

Facilities and Resources

The Department of Earth and Environment features impressive computational, analytical and field facilities. The FIU Southeast Environmental Research Center (SERC) is dedicated to research, education and restoration of the Everglades and other threatened environments. The Florida Coastal Everglades Long Term Ecological Research (FCE LTER) program is based at SERC and investigates key hydrology, climate and human activities that interact with ecosystems and population dynamics in the Everglades. The Ecosystems and Risk Assessment Laboratory and the Environmental Analysis Research Laboratory provide state-of-the-art, NELAC accredited ecotoxicology and environmental chemistry facilities. FIU has a long history of excellence in environmental research and education in aquatic and terrestrial ecosystems worldwide, with particular expertise in South Florida. FIU has been a key player in the assessment of the impact of the 2010 Deepwater Horizon oil spill and has been consulted on other oil-related events around the world.

Across the earth, atmospheric, and environmental sciences, the Department of Earth and Environment provides hands-on instruction in field and laboratory techniques and training in effective policy and management decision-making.

About the Department
Finding solutions for today's environmental challenges depends not only on cutting-edge science research, but also on an understanding of the contributing cultural, social and economic factors. At FIU, research and teaching are conducted with the understanding that human survival depends on developing effective policies to ensure sustainable societies.

As part of the School of Environment, Arts and Society in the College of Arts & Sciences, the Department of Earth and Environment is focused on understanding the natural world and its interactions with human systems to build the skills and understanding needed for sustainable societies. The department offers a broad range of classroom, field, and laboratory experiences in atmospheric, aquatic, earth and agricultural sciences as well as environmental management and policy. Through multidisciplinary research and education, the department creates synergies in water resources and water policy, climate change and climate policy, and geological hazards and hazard mitigation. Faculty provide regional and international perspectives on important environmental issues, ensuring students are ready to face this challenge of the 21st century. Excellence in the fields of remote sensing, geographic information systems, and toxicology have enabled the department to contribute to rapid responses to environmental disasters.

Subdisciplines
GIS offers undergraduate degree programs in geosciences – with atmospheric sciences and geological sciences majors – and a B.S. in Environmental Studies. In addition, the department offers a B.S. in Sustainability and the Environment, available both onsite and fully online. As part of the College of Arts & Sciences, the department administers three undergraduate certificate programs: Environmental Studies, Agroecology, and Biodiversity Conservation and Management. In addition, the department is a major contributor to the Graduate Certificate in Geographic Information Systems and Remote Sensing.

Graduate Studies in Earth and Environment
The Department of Earth and Environment offers a master of science and a Ph.D. in Geosciences as well as a Master of Science in Environmental Studies. Students who choose to pursue the geosciences track can focus their studies in a number of areas including hydrogeology, paleobiology, and climate/atmosphere science. In the environmental sciences track, graduate students may select a concentration in environmental policy, natural resource science and management, or sustainable development. In either track, students can choose to concentrate on the regional geology and environmental issues of South Florida, the Caribbean, Latin America and other areas. Regional concentrations afford students a more focused and nuanced understanding of the cultural and political values of their chosen region giving them a competitive edge in the job and research market.

Professional Studies in Earth and Environment
FIU offers a Professional Master of Science in Environmental Policy and Management. The program is structured for professionals who want to enhance their knowledge and skill sets. This 18-month degree program requires 30 credits of coursework – conveniently offered on weekends and in the evenings – and completion of a six-credit internship or practicum. This degree is designed for professionals who want to enhance their knowledge and skill sets. The 18-month degree program requires 30 credits of coursework – conveniently offered on weekends and in the evenings – and completion of a six-credit internship or practicum. For information, visit earthandenvironment.fiu.edu.

Research in Earth and Environment
The Department of Earth and Environment conducts basic and applied research focused on understanding the natural world, both physical and biological, and its interactions with human systems. Through a multidisciplinary approach, the department seeks to understand the biogeochemical factors as well as the cultural and social context of today's environmental challenges. Combined research efforts in geosciences and environmental studies provide the scientific basis and political acumen to effect lasting sustainable changes in economic, educational, and social systems.

Research groups in the Department of Earth and Environment have grown into programs and centers driven by faculty dedicated to translating their research into tangible change on the regional, national and international levels. For example, the Geography program seeks to understand the delicate balance and underlying connections between natural, agricultural and urban areas. Situated in South Florida along the Everglades, beset by an ever-expanding population, the program educates and engages members of the community. Through high school student and teacher workshops, the program translates research on the university level to meaningful K-12 curriculum in order to increase awareness and inspire action.
Across the earth, atmospheric, and environmental sciences, the Department of Earth and Environment provides hands-on instruction in field and laboratory techniques and training in effective policy and management decision-making.

The Ecotoxicology and Risk Assessment Laboratory and the Environmental Analytical Research Laboratory provide state-of-the-art, NELAC accredited ecotoxicology and environmental chemistry facilities at FIU. The university has a long history of excellence in environmental research and education in aquatic and terrestrial ecosystems worldwide with particular expertise in South Florida. FIU has been a key player in the assessment of the impact of the 2010 Deepwater Horizon oil spill, and it has been consulted on other oil-related events around the world.

As part of FIU’s commitment to tropical conservation, FIU and the National Tropical Botanical Garden have joined forces to create the International Center for Tropical Botany at The Kampong in Coconut Grove, Fla. Scientists at the center preserve and study tropical plants for future generations, with a strong focus on the economic uses of tropical plants. Through community partnerships, a wide range of facilities are available at partner institutions including Fairchild Tropical Botanic Garden, Zoo Miami, and Montgomery Botanical Center. FIU also maintains a strong partnership with Everglades National Park, and atmospheric research is enhanced by partnerships with NOAA’s National Hurricane Center located on FIU’s Modesto A. Maidique Campus.

Financial Support

Financial support is available to eligible Ph.D. students through teaching assistantships, competitive fellowships, and faculty research programs.
About Florida International University

Florida International University (FIU) is recognized as a Carnegie engaged university. It is a public research university with colleges and schools that offer more than 100 bachelor’s, master’s and doctoral programs. As one of South Florida’s anchor institutions, FIU contributes $8.9 billion each year to the local economy. FIU is Worlds Ahead in finding solutions to the most challenging problems of our time. FIU emphasizes research as a major component of its mission. FIU awarded over 55,000 degrees and enrolled more than 54,000 students in two campuses and three centers including FIU Downtown on Brickell, FIU@I-75, and the Miami Beach Urban Studios.

About the College of Arts & Sciences

As the heart of a leading public research university, the College of Arts & Sciences plays a vital role in the intellectual, cultural and civic life of local, national and international communities. The college provides an educational foundation that prepares FIU students to be successful and engaged citizens in a global society.

About School of Environment, Arts and Society

By bringing together the natural sciences, social sciences and humanities, the School of Environment, Arts and Society (SEAS) is transforming the way we conduct research, educate students and engage the community. Because the world’s environmental challenges are multi-dimensional, the school’s revolutionary approach to a full spectrum education will ensure our students become innovative leaders of the 21st century. SEAS includes three signature departments: Biological Sciences, Earth and Environment, and English. The school also houses many of FIU’s prominent centers and programs.

Department of Earth and Environment

The Department of Earth and Environment features impressive computational, analytical and field facilities. The FIU Southeast Environmental Research Center (SERC) is dedicated to research, education and restoration of the Everglades and other threatened environments. The Florida Coastal Everglades Long Term Ecological Research (FCE LTER) program is based at SERC and investigates near-hydrology, climate and human activities interact with ecosystems and population dynamics in the Everglades. The Ecotoxicology and Risk Assessment Laboratory and the Environmental Analysis Research Laboratory provide state-of-the-art, NELAC accredited ecotoxicology and environmental chemistry facilities at FIU. The university has a long history of excellence in environmental research and education in aquatic and terrestrial ecosystems worldwide with particular expertise in South Florida. FIU has been a key player in the assessment of the impact of the 2010 Deepwater Horizon oil spill, and it has been consulted on other oil-related events around the world.
